CAKE WARS

~ Have Your Cake and Eat it, Too ~
Collect the most cake points to win, but watch out for cake disasters and other bakers!

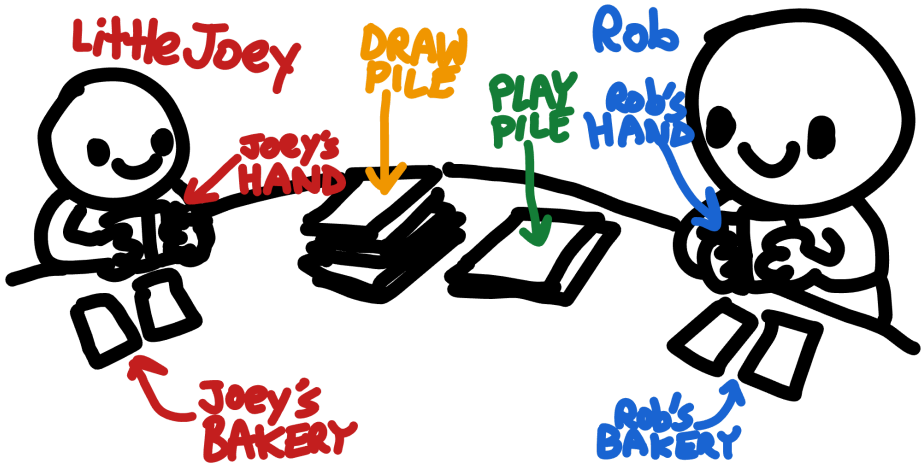

SET UP

Shuffle all the cards and put them in a pile, face down. That's the Draw Pile. Leave an empty space for the Play Pile, where people will put their cards during the game. Each player needs to leave an empty space for their personal Bakery. Then, deal players cards until their hand is "full." This chart tells you how much is full.

2 or 3 players	4 or 5 players
"full" is 4 cards	"full" is 3 cards

PLAY

Cards can go in the "Draw Pile" or "Play Pile." Each player also has a "Hand" and a "Bakery." See below for a diagram.

Play starts from the player who lost the previous game and proceeds clockwise. (If it's the first game, just let the player who brought the cards go first.)
Every turn, you draw cards from the Draw Pile until your hand is full (see the chart above)
On your turn, you **must** play at least one card onto the Play Pile. You can play more cards, but you must end your turn with at least one card in your hand. (The only exceptions are for the end of the game and for stacking on the Wedding Cake.)
Important: you can only play cards out of your hand, not out of your Bakery. Cards can only be played onto the Play Pile, not into your Bakery.
Here is a summary of the different cards you can play on your turn.

- CAKE and BONK – they do nothing on their own. But you can use other cards to put them in your Bakery, changing your score. Cakes add to your score, but Bonks subtract from your score.
- EAT – you can play this directly on top of a Keep Card (Cake, Bonk, Pineapple Upside-Down Cake, Super Spatula, or Spoiled Ingredients). After you play it, you simply pull the Keep Card out from underneath the EAT card, and then place it in your own Bakery.
  Note: If Eat is played, but there is no Keep Card underneath, nothing happens.
- SERVE – It works the same as an Eat card, except you put the Keep Card in another player's Bakery. You can choose who to give the card to, but you can't use SERVE to give it to yourself. Only EAT can do that.
  Note: If Serve is played, but there is no Keep Card underneath, nothing happens.
- STEAL – Immediately after playing this, choose a card from another player's Bakery and put it in your own Bakery. (You cannot use this to remove things from your own Bakery.)
- CAKE BOX – Immediately after playing this, choose a card from your Bakery. Give it to the player sitting on your right. It will go in that player's Bakery.
- SUPER SPATULA – If you get it in your Bakery, it divides points from your BONK cards in half. If you have two of these, that means you would divide the points from BONK cards by four. Always round fractions down. (Even with Pineapple Upside-Down cake, it still works on the cards labeled BONK. It never works on cards labeled CAKE.)
- SPOILED INGREDIENTS – If it's in your bakery, it divides points from CAKE cards in half. Always round fractions down. (Even with Pineapple Upside-Down cake, it still works on the cards labeled CAKE. It never works on cards labeled BONK.)
- PINEAPPLE UPSIDE-DOWN CAKE – Reverses your final score. See "HOW TO WIN" for more information.

...continued on next page

- FLOUR – The next card played must be a CAKE or BONK card.
    - If it is your turn and FLOUR is in play, but you don't have CAKE or BONK in your hand, you must say "pass" and skip your turn.
    - FLOUR stops working if everybody passes. In this case, the player to the left of whoever originally played FLOUR gets to play whatever he chooses.
- WEDDING CAKE – When it is your turn, you can play CAKE or BONK directly on top of the Wedding Cake and then immediately put it in your Bakery.
    - You can stack CAKE cards on the WEDDING CAKE – that is, you could play as many CAKE cards as you want, all at the same time. You get to put them **all** in your Bakery afterwards.
    - You can stack BONK cards in the same way, but **do not mix** BONK and CAKE cards.
    - When stacking, you are allowed to use up all your cards and have your hand be empty. This is an exception to the one-card-left rule.

HOW TO WIN

The game ends after all the cards have been played.

Note: in the end of the game, the draw pile will be used up. So in these rounds, are you allowed to play all your cards, or does the one-card-left rule still apply? Well, the solution is:

- If you draw a card at the **start** of your turn, you must leave one card in your hand at the **end** of your turn.
- If the draw pile is completely used up at the **start** of your turn, you are allowed to play until all your cards are gone. The one-card-left rule does not apply here.

Then, the player with the most Cake Points wins! Cake points represent the delicious enMonicament that comes from eating cake. You tally up your points like this:

1. Count all your points from Cake Cards. It should be easy because each card say how many points it gives you. (If you have Spoiled Ingredients, divide by two and round down to the nearest whole number.)
2. Count all your points from Bonk Cards. (If you have Super Spatula, divide by two, and if you have two Super Spatulas, divide by four. Round down to the nearest whole number.)
3. Subtract **all the points from Bonk Cards** from **all the points from Cake Cards**.
4. If you have **exactly one Pineapple Upside-Down Cake**, you multiply your score by -1 (negative one). If you have none or two of these cards, don't worry about this step.
5. You now have the final score!

If you're still confused, let's look at some players' Bakeries at the end of the game.

Leo has: Cake +1, Cake +3, Bonk -3, and Super Spatula.

1. Leo's Cake Cards give him +4 points.
2. Leo's Bonk gives him -3 points. But, because of the Super Spatula, we divide by two. It's now -1½ points. We always round down to the nearest whole number so that becomes -1 point.
3. Subtract **1** (the points from Bonk Cards) from **4** (the points from Cake Cards). 4 minus 1 equals 3.
4. Leo has no Pineapple Upside-Down Cake.
5. Leo's final score is 3!

Monica has: Cake +2, Cake +2, Bonk -3, Spoiled Ingredients, and Pineapple Upside-Down Cake.

1. Monica's Cake Cards give her +4 points. But, because of the Spoiled Ingredients, we divide by two. That becomes +2 points.
2. Monica's Bonk gives her -3 points.
3. Subtract **3** (the points from Bonk Cards) from **2** (the points from Cake Cards). 2 minus 3 equals -1, negative one.
4. BUT, Monica has **exactly one** Pineapple Upside-Down Cake! This flips her score upside-down and it goes from -1 (negative) to 1 (positive).
5. Monica's final score is 1!

Tristan has: Cake +1, Pineapple Upside-Down Cake, and Pineapple Upside-Down Cake.

1. Tristan's Cake Card gives him +1 points.
2. Tristan has no Bonks at all.
3. 1 minus 0 equals 1.
4. Tristan has **two** Pineapple Upside-Down Cakes! But, they cancel out, so we don't need to flip his score upside-down.
5. Tristan's final score is 1!

It is possible to get negative score.
